

RocketFire PCI FireWire Card

The RocketFire PCI FireWire Card brings FireWire technology directly to your desktop computer. Its OHCI design (Open Host Computer Interface) supports blistering speeds up to 400 Mbps on either Mac or Windows desktop computers. That's 30 times faster than USB!

Imagine being able to attach an external FireWire hard drive and your DV camera directly to your computer without the need to restart the system or install cryptic drivers. Capture video, edit it, and then save it to an external pocket-size hard drive to move data between systems quickly.

FireWire supports up to 63 devices on the chain, so adding and removing hardware is as easy as plugging a cable into your system. The RocketFire PCI FireWire Card has two external ports to add greater flexibility and manageability for your devices. Your DV equipment can be installed on one port, while the daisy chain of peripherals can be on the second port. With the RocketFire PCI FireWire Card, every 1394a device is truly "plug-and-play". No need to mess with jumpers, ID settings, or complicated software drivers. And with cable power support, devices can be powered directly from the cable (I-link devices do not support cable power).

Host Interface	PCI Form Factor. Hot Pluggable for all 1394/1394a devices
Link Layer	1394a compliant. Open Host Controller Interface 1.0 (OHCI). PCI/OHCI bridge
PHY Layer	Supports data transfer rates of 100, 200, 400 Mbps Automatically switches to the peripheral's highest supported speed
1394a Ports	Two 6-pin external sockets Supports cable power (9 watts of available power)
Known Compatibility	FireWire hard drives from VST, Indigita, LaCie, ORB and Yano; digital cameras with I-link support; Epson FireWire printers; and all other 1394a-enabled devices.
Emissions Testing	FCC B compliant
Package Includes	RocketFire PCI FireWire Card 6-pin to 6-pin FireWire Cable 4-pin internal Power Cable CD with Drivers for the Mac
Warranty	One-Year Warranty
System Requirements	PowerMac PCI system running Mac OS 8.5.1 or later (5xxx/6xxx not supported). PCI desktop computer running Windows 98SE or Windows 2000.
